

YOGESH JOSHI

Bangalore, KA 560102 • (+91) 8000038220 • iyogeshjoshi@gmail.com •  iyogeshjoshi •  iyogeshjoshi

Professional Summary

Staff Software Engineer with 13+ years of expertise in full-stack JavaScript/TypeScript development. Architected an AWS infrastructure redesign that cut cloud costs by 80% while improving scalability, and led delivery of enterprise-grade micro-frontend systems handling 100K+ daily transactions. Known for architectural leadership, cross-functional mentorship, and shipping complex features on tight timelines.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript, Go, PHP, Python
- **Frontend:** React, Next.js, Vue.js, Angular, Redux, React Native, Electron, GWT
- **Backend:** Node.js, NestJS, Express.js, GraphQL, Firebase Functions, Spring Boot
- **Architecture:** Micro-frontends, Webpack Module Federation, Microservices, Serverless, Event-driven Architecture
- **Cloud/DevOps:** AWS (EC2, S3, Lambda, DynamoDB), GCP, Docker, Kubernetes, Terraform, MuleSoft, Jenkins, GitHub Actions
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Firebase Firestore, DynamoDB
- **Testing:** Jest, Cypress, Playwright, Selenium, Mocha, TDD/BDD
- **Security:** OAuth, JWT, SAML, OWASP Guidelines

Professional Experience

Whatfix Bengaluru, KA | Jun 2025 – Present

Staff Software Engineer

Whatfix is a leading Digital Adoption Platform (DAP) empowering organizations to guide, automate, and track user journeys across software applications.

Selfhelp Hub

- Contextual fab embedded in client applications, giving end-users access to curated help articles, training videos, automations, and task assignments
- **Delivered "Tasklist" feature** within one month – enables organizations to create actionable tasks for end-users with configurable notification frequency via the fab
- Tasklist supports multiple task types: reading articles, watching videos, performing automations, and completing defined actions
- **Increased Selfhelp Hub adoption from 80% to 100%** across enterprise client base through feature enhancements and UX improvements
- Tech Stack: ReactJS, Micro-frontends (Webpack Module Federation), GWT, Spring Boot, Playwright

QuickRead

- AI-powered query system enabling users to ask questions against all curated organizational content
- Building core agent that traverses organizational content and generates contextual, accurate responses to user queries; improving content discoverability across enterprise client base

Glimpse

- In-context FAQ solution allowing organizations to define highlightable selectors on their applications; selectors are underlined with a distinctive rainbow indicator and open a modal with AI-generated answers via QuickRead
- Implementing suggested questions section that auto-populates queries in Selfhelp Hub for seamless cross-product integration

Team Leadership

- Mentoring team of 3-4 engineers, conducting code reviews, and driving technical excellence

YARA International Bengaluru, KA | Aug 2020 – Feb 2025

Lead Software Engineer (Aug 2023 – Feb 2025)

- Lead team brainstorms to streamline tasks, boosting efficiency and clarity
- Architect complex systems, achieving measurable AWS cost reductions
- **Spearheaded AWS infrastructure redesign** that reduced cloud costs by 80% while improving system performance and scalability
- **Architected micro-frontend architecture** using React, enabling team autonomy and faster deployment cycles

YOGESH JOSHI

Bangalore, KA 560102 • (+91) 8000038220 • iyogeshjoshi@gmail.com •  iyogeshjoshi •  in iyogeshjoshi

- Designed and deployed microservices on AWS and MuleSoft Anypoint middleware, handling 100K+ daily transactions
- Facilitate learning sessions, enhancing team's software design skills
- Collaborate with UI/UX teams to optimize cross-platform user experience
- Deploy and maintain robust applications on MuleSoft and AWS
- Analyzed system architecture to streamline processes, resulting in marked improvements in product scalability and performance
- Implemented cutting-edge microservice APIs, optimizing front-end application performance and user experience
- Examined codebase efficiencies, leading to significant performance enhancements and streamlined operations
- Led engineering team, conducting technical reviews, mentoring junior developers, and driving SOLID principles adoption
- Technologies: NestJS, AWS, MuleSoft, Kubernetes, React, TypeScript, Microservices

Senior Software Engineer (Aug 2020 – Aug 2023)

- Developed mobile apps with React Native, boosting user engagement by enhancing functionality
- Led intern training, fostering skill development and onboarding efficiency
- Resolved technical issues for junior developers, improving team productivity
- Managed app releases, ensuring timely updates and feature rollouts
- Designed backend APIs and microservices, optimizing system architecture
- Spearheaded app performance optimizations, resulting in noticeable improvements in user engagement and retention
- Implemented CI/CD pipelines, streamlining deployment processes and reducing release times significantly
- Conducted code reviews to ensure adherence to coding standards, enhancing code quality and reducing bugs
- Maintained comprehensive technical documentation, which improved onboarding efficiency and reduced knowledge gaps
- Created NestJS micro-service template adopted as standard across backend teams
- Developed cross-platform mobile application using React Native, MobX, and Firebase, serving 50K+ users
- Mentored 4 interns/trainees through onboarding and skill development programs
- Managed release pipeline from internal testing to Google Play Store production releases
- Technologies: React Native, Firebase, NestJS, MobX, Node.js, Kubernetes, TypeScript

Ather Energy Private Ltd. Bengaluru, KA |Jun 2015 – Aug 2020

Senior Software Engineer (Associate Manager)

- Led software development using ReactJS and Redux, enhancing vehicle-system integration
- Developed cross-platform mobile apps with React Native, improving data synchronization
- **Designed vehicle navigation system** using vanilla JS/React and Google Maps API, optimized for hardware with severe memory constraints across the Ather scooter fleet
- **Built mobile app using React Native + Firebase** for vehicle-cloud sync, achieving 4.6★ app store rating with 100K+ downloads
- Engineered Go-lang integrations for system-level vehicle applications
- Identified and resolved app performance issues, boosting efficiency
- Collaborated with system team on Go-lang integration, enhancing UI app functionality
- Diagnosed and resolved system bottlenecks, implementing optimized solutions that resulted in noticeable performance improvements
- Facilitated the integration of Go-lang applications with UI, fostering a cohesive development environment across teams
- Automated routine tasks through scripting, significantly accelerating QA processes and boosting team efficiency
- Created automation tools using shell scripting, reducing QA testing time by 40%
- Technologies: React, Electron, Node.js, Kubernetes, GCP, Go-lang, Python, D3, Google Maps SDK/Navigation, React Native, Firebase, Socket.IO, Microservices

Function Space Pvt. Ltd. Bengaluru, KA |May 2014 – Jun 2015

Software Engineer (Software Artisan)

- Developed web applications, ensuring robust functionality and user engagement
- Built and maintained a science forum platform using PHP and JavaScript, enhancing user interaction
- Created educational applications integrating learning and gaming, boosting user engagement
- Built online community platform (PHP/JavaScript), including Learnise — a learning ecosystem with in-browser IDEs
- Developed Play Physics, a suite of interactive science learning games

YOGESH JOSHI

Bangalore, KA 560102 • (+91) 8000038220 • iyogeshjoshi@gmail.com •  iyogeshjoshi •  iyogeshjoshi

- Collaborated with sales and product teams to align development with user needs, improving satisfaction
- Developed dashboards to analyze user data, providing insights for strategic decisions
- Pioneered a gamified learning platform, fostering engaging educational experiences and enhancing user interaction with science concepts
- Crafted multi-tier dashboards for data tracking, enabling precise analysis of user behavior and informed decision-making
- Implemented comprehensive testing protocols for web applications, ensuring flawless functionality and user-centric design
- Technologies: PHP, JavaScript, MongoDB, PostgreSQL, Socket.IO, Node.js, React Native, Python, LaTeX, Express

Avinashi Ventures Pvt. Ltd. Surat, GJ | Jun 2013 – Apr 2014

Fullstack Software Developer

- Built comprehensive HRMS system with AngularJS, Node.js; improved team target tracking
- Created bulk SMS system with Node.js, enhancing communication efficiency
- Automated report generation with Node.js, PHP, boosting data-driven decision-making
- Engineered an intuitive HRMS analytics dashboard, driving proactive decision-making through predictive insights
- Integrated telemarketing SMS system with BizBrain, optimizing alert delivery and enhancing communication efficiency
- Crafted automated email reporting tools, facilitating timely information flow and data-driven strategies
- Maintained robust backend systems using Node.js and MongoDB, ensuring seamless data integrity and system reliability
- Technologies: Node.js, AngularJS, PHP, Socket.IO, MongoDB, PostgreSQL, Express

Education

Bachelor of Engineering: Computer Engineering (2009 – 2013)

Gujarat Technological University, Surat, GJ

CGPA: 8.05
